**Subject:** 3 Sept 2017 -- ASPECT update 7 -- 1420  
**Date:** Sunday, September 3, 2017 2:30:26 PM

---

ASPECT is on the ground at Hobby getting fuel. Expect a hot turn on the fuel and should be back in the air 1440.

ASPECT has completed  $\frac{3}{4}$  of the points for zone 7. Once airborne, ASPECT will assume a 2 mile position and stay clear until ignition. ASPECT will remain on station making periodic measurement and collecting imagery.

After the Arkema collection is complete, ASPECT will divert to Addison for a to dump data, pull a computer from the aircraft and conduct some routine maintenance to the aircraft. None of these activities will tie up the aircraft for response. The aircraft will return to Houston early in the morning.
